

CHRISTIAN ALVERIO

Coral Springs, FL | (954) 589-3159 | christianjalverio@gmail.com | christianjalverio-del.github.io

SUMMARY

Highly motivated cybersecurity student and lifelong learner, currently pursuing a Bachelor of Science in Cybersecurity at Florida International University (expected graduation 2027). Learns by building rather than just studying — while working full-time in a fast-paced customer support role, I independently designed, secured, and administered a full home network security lab covering firewall administration, VPN, IDS/IPS, PKI, and virtualization. Hold CompTIA A+, Network+, and Security+ certifications plus the Google Cybersecurity Professional Certificate. Seeking a SOC analyst internship to apply that same hands-on troubleshooting approach — like tracing a silent VPN connectivity failure back to a single WAN firewall setting — in a live security environment.

CERTIFICATIONS

CompTIA Security+ (SY0-701) — Issued June 2026, valid through June 2029
CompTIA Network+ — Issued May 2026, valid through June 2029
CompTIA A+ — Issued May 2026, valid through May 2029
Google Cybersecurity Professional Certificate — Issued March 2026 (Coursera)

TECHNICAL SKILLS

Security & Networking: pfSense firewall administration, WireGuard VPN, Snort IDS/IPS, network segmentation, least-privilege firewall/NAT rule design, TLS/PKI (self-signed CA & certificate lifecycle), DNS, DHCP, Nmap, Wireshark

Systems & Virtualization: Proxmox VE, Linux (Debian/Ubuntu), Docker, LXC containers, TrueNAS/ZFS storage administration, Samba/NFS, UPS monitoring

Monitoring & Alerting: Uptime Kuma, log-based intrusion alerting, automated notification pipelines, service-health monitoring

Other: Bash scripting, cron automation, access control lists (ACLs), incident troubleshooting & root-cause analysis, technical documentation

PROJECTS

Home Network Security Lab — Independent Project 2026

Full technical write-up, network topology, and screenshots: christianjalverio-del.github.io

- Designed and deployed a segmented home network on pfSense, implementing least-privilege firewall rules and a self-hosted WireGuard VPN with tiered, alias-based access control for remote administration.
- Deployed and tuned Snort IDS/IPS on the network perimeter with curated rule categories; built automated real-time alerting for intrusion detections, confirmed against live inbound traffic (e.g. Spamhaus DROP-list hits).
- Built and managed a Proxmox virtualization host running containerized services with a self-hosted PKI (custom CA), including a password manager, reverse proxy, and uptime monitoring across the environment.
- Diagnosed and resolved networking, permissions, and availability issues across a multi-layer NAT topology, applying systematic root-cause analysis under real production constraints.

RELEVANT COURSEWORK

Google Cybersecurity Professional Certificate — applied exercises in incident report writing (DoS/SYN-flood traffic analysis), network traffic analysis (DNS/ICMP troubleshooting, Wireshark packet capture), and Linux file permissions.

CompTIA Network+ / Security+ exam-prep coursework — hands-on practice with Cisco Packet Tracer (network simulation), Wireshark, Nmap (network scanning), PuTTY (SSH/terminal access), and VirtualBox.

EXPERIENCE

Customer Care Representative — Ally Bank / GMAC Financial Services Feb 2025 – Present

- Resolve complex account-access and security-related issues (transaction disputes, unauthorized charges) under compliance and data-privacy requirements, applying structured troubleshooting under service-level time constraints.
- Document case details and track resolution in Salesforce CRM, building ticket-handling and escalation habits directly applicable to SOC and help desk environments.

EDUCATION

Florida International University
Bachelor of Science, Cybersecurity

Expected Graduation: 2027
