

# CHRISTIAN ALVERIO

Coral Springs, FL | (954) 589-3159 | christianjalverio@gmail.com

## SUMMARY

---

Cybersecurity student at Florida International University with CompTIA A+, Network+, and Security+ certifications plus the Google Cybersecurity Professional Certificate. Hands-on experience designing, securing, and troubleshooting a full home network infrastructure — including firewall administration, VPN configuration, IDS/IPS deployment, and access-controlled storage. Seeking a SOC analyst internship or IT support role to apply practical security and networking skills in a production environment.

## CERTIFICATIONS

---

- **CompTIA Security+ (SY0-701)** — Issued June 2026, valid through June 2029
- **CompTIA Network+** — Issued May 2026, valid through June 2029
- **CompTIA A+** — Issued May 2026, valid through May 2029
- **Google Cybersecurity Professional Certificate** — Issued March 2026 (Coursera)

## TECHNICAL SKILLS

---

- **Security & Networking:** pfSense firewall administration, WireGuard VPN, Snort IDS/IPS, network segmentation, least-privilege firewall/NAT rule design, TLS/PKI (self-signed CA & certificate lifecycle), DNS, DHCP
- **Systems & Virtualization:** Proxmox VE, Linux (Debian/Ubuntu), Docker, LXC containers, TrueNAS/ZFS storage administration, Samba/NFS, UPS monitoring
- **Monitoring & Alerting:** Uptime Kuma, log-based intrusion alerting, automated notification pipelines, service-health monitoring
- **Other:** Bash scripting, cron automation, access control lists (ACLs), incident troubleshooting & root-cause analysis, technical documentation

## PROJECTS

---

### Home Network Security Lab — Independent Project

2026

*Full technical write-up available in portfolio*

- Designed and deployed a segmented home network on pfSense, implementing least-privilege firewall rules and a self-hosted WireGuard VPN with tiered, alias-based access control for remote administration.
- Deployed and tuned Snort IDS/IPS on the network perimeter with curated rule categories; built automated real-time alerting for intrusion detections and VPN connection events.
- Administered a TrueNAS storage server with access-controlled SMB/NFS shares, scheduled backups, and UPS-backed power monitoring.
- Built and managed a Proxmox virtualization host running containerized services with a self-hosted PKI (custom CA), including a password manager, reverse proxy, and uptime monitoring across the environment.
- Diagnosed and resolved networking, permissions, and availability issues across a multi-layer NAT topology, applying systematic root-cause analysis under real production constraints.

## EXPERIENCE

---

### Customer Care Representative — Ally Bank

[Month Year] – [Month Year]

- Provided technical troubleshooting support to customers, diagnosing and resolving account access and technical issues within service-level time constraints.
- Followed structured procedures while adapting to unique customer situations, building strong documentation, communication, and ticket-handling habits directly applicable to SOC and help desk environments.

## EDUCATION

---

### Florida International University

Expected Graduation: 2027

Bachelor of Science, Cybersecurity
